PROFESSIONAL SUMMARY

Technical educator and AI builder who makes complex technology accessible. Experienced workshop facilitator who has taught full stack engineering to diverse cohorts and built LLM-powered applications hands-on. Combines deep AI fluency spanning prompt engineering to agentic systems with a proven ability to guide engineers, developers, and business audiences through practical, hands-on learning. Ready to bring technical depth and teaching craft to enterprise AI enablement at scale.

TECHNICAL SKILLS

- **AI & Generative AI:** Claude, LangGraph, LLMs, agentic workflows, prompt engineering, RAG pipelines, AI agents, function calling, LLM integration, AI evaluation, generative AI platforms
- **Development & Tooling:** Python, JavaScript, TypeScript, FastAPI, REST APIs, SDK integration, API tooling, SQLite, PostgreSQL, developer tools, CLI
- **Cloud & Infrastructure:** AWS, Git/GitHub, Linux, Bash, Docker, CI/CD, workflow orchestration, system design
- **Training & Facilitation:** Workshop delivery, bootcamp facilitation, curriculum design, technical instruction, audience engagement, stakeholder communication, live troubleshooting, AI fluency training

PROFESSIONAL EXPERIENCE

Yoonee AI | Remote | AI Engineering Intern Jan 2026 – Apr 2026

- Built AI-powered chatbot integrating vector search and natural language querying for end users.
- Developed AI-driven document processing with automated extraction and classification workflows.
- Delivered internal dashboard tools for data-driven analytics, enabling non-technical stakeholders.

Revature | Reston, VA | Technical Instructor Sep 2021 – Aug 2023

- Delivered full stack engineering bootcamps to diverse cohorts — from CS majors to career changers.
- Redesigned training curriculum based on student friction data, boosting engagement and completion.

PORTFOLIO PROJECTS

Agentic Prediction Copilot — AI-Powered Forecasting System | Next.js, TypeScript, Python, LangGraph, SQLite, Clerk

- Built prediction system with agentic decision loops, structured querying, and result logging.
- Designed generative UI with agent-driven component rendering based on pipeline context.

Autonomous Task Agent — Configurable Task Automation | Python, Windows Services, API Integration

- Built autonomous agent for scheduling, executing, and monitoring task workflows with error handling.
- Designed tool-integrated agent logic with automated decision-making and production reliability.

EDUCATION

University of the People | Remote Apr 2023 – Expected Sep 2026

Bachelor of Science in Computer Science | President's List

- **Coursework:** Software Engineering, Data Structures, Algorithms, Networking, Web Programming

Agentic Workflow Automation | LaunchCode | Online 2026

Full Stack Java Developer Bootcamp | Revature | Reston, VA 2021
