PROFESSIONAL SUMMARY

Software Engineer and CS student with a strong full-stack background and a focus on **Applied AI**. Leveraged experience as a Technical Instructor to master debugging, technical communication, and rapid upskilling. Adept at integrating **Agents, LLMs and RAG** into modern web applications. Seeking an internship to apply technical expertise in software engineering and **AI-powered development**.

EDUCATION

University of the People | Remote

Apr 2024 – Present (Expected 2026)

Bachelor of Science in Computer Science | President's List

- **Coursework:** Software Engineering, Mobile Application Development, Data Structures, Web Programming.

Full Stack Java Developer Bootcamp | Revature | Reston, VA

2021

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, C++.
 - **Web Development:** React, Next.js, Angular, Spring, HTML5, RESTful APIs.
 - **AI & ML:** LLM Integration, Retrieval-Augmented Generation (RAG), Agentic Systems.
 - **Tools & DevOps:** Git/GitHub (Version Control), PostgreSQL, VS Code, Linux, AWS.
-

PROFESSIONAL EXPERIENCE

Outlier AI | Remote | AI Code Evaluator (Freelance)

Nov 2023 – Apr 2024

- Evaluated and debugged AI-generated code snippets in Python and Java to improve model accuracy.
- Developed original "Gold Standard" coding solutions and prompts to train models.

Revature | Reston | Software Engineering Technical Instructor

Sep 2021 – Sep 2023

- Developed full-stack demonstration applications using Angular, Java, Spring Boot, and PostgreSQL, showcasing RESTful API integration and database connectivity.
 - Led live coding demonstrations in Java, JavaScript, SQL, and Spring to illustrate core development concepts.
 - Mentored students in full-stack development, data structures, SQL, and object-oriented programming.
-

TECHNICAL PROJECTS

Sage - AI-Powered Prediction Tracker | Next.js, Python, OpenAI API, Vector DB

- Built a full-stack prediction tracking app using Next.js for server-side rendering and dynamic routing.
- Integrated a Retrieval-Augmented Generation (RAG) chatbot allowing users to query prediction data using natural language, powered by the OpenAI API.

Mars Rover Sim - Reinforcement Learning | Python, PyBullet, PyTorch

- Developed an autonomous agent using Reinforcement Learning (RL) to navigate a simulated rover.
- Utilized PyBullet for physics simulation and trained the agent to identify goals and navigate obstacles without human intervention.
